

AI-powered investment intelligence — see the true health of every asset you hold, or build a new one from scratch.

Nxance is an explainable, quantitative investment intelligence platform. Its deterministic engines diagnose existing portfolios and construct new ones, and its AI-powered terminal answers finance and market questions in plain language — backed by research-driven, proprietary models, not black-box predictions. Every number shown to a user is computed by a verified engine, never invented by AI.

— HOW IT WORKS

ENGINE 01

Health Check

Diagnoses an existing portfolio across any asset mix using 26+ sub-engines: return analysis, risk (VaR/CVaR/Sharpe/Sortino), diversification, cost leakage, goal-alignment probability, macro sensitivity, news sentiment, fraud/governance screening, and more — output as a 0–100 health score with plain-language, rupee-quantified fixes.

ENGINE 02

Construction

Builds a new, diversified portfolio from a goals-and-risk questionnaire, run through 26+ sub-engines — Mean-Variance Optimization (Black-Litterman + Ledoit-Wolf), allocating across equity, MF, FD, bonds, gold, ETFs, commodities and currency — with full reasoning and multiple candidate portfolios to compare.

ENGINE 03

NxanceLM

Two parts: a live market/news & portfolio Terminal, and an AI-powered Chat that answers finance, portfolio, and economy questions in plain language.

HEALTH CHECK

Already investing? Start here.

- 1 Upload what you hold**
Any mix of equity, MF, FD, bonds, gold, and more. Results in under 10 seconds.
- 2 Find the problems**
Is it earning enough? Riskier than it needs to be? Costing you more than it should?
- 3 Fix them**
Keep what works, replace what doesn't — and see what a switch costs before you agree to it.
- 4 Keep it on track**
Watched daily, adjusted when markets move. You hear from us the moment it drifts off course.

CONSTRUCTION

Starting fresh? Start here.

- 1 Tell us your goal**
What you're saving for, how long you have, and how big a fall you could live with.
- 2 Get a full portfolio**
Built across equity, MF, FD, bonds, gold, ETFs, commodities and currency — not just a single asset class.
- 3 See the reasoning**
A reason for every holding, plus the option that came a close second and exactly where it fell short.
- 4 Stress-tested, then tracked**
Tested against five real market crashes before you commit — then watched and adjusted the same way, daily.

No-Black-Box Guarantee: Health Check and Construction results always come from Nxance's own deterministic engines — 26+ separate sub-engines have to agree before anything reaches you, verified by a built-in Number Guard. NxanceLM is a separate, AI-powered layer for answering questions, not a decision-maker.

— WHAT MAKES IT DIFFERENT

No made-up numbers

NxanceLM is never allowed to show a figure Nxance's own engines haven't worked out. Anything it can't back up is blocked before it reaches you.

It goes by what you did

Other apps ask how you'd react to a crash. Nxance looks at when you actually bought and sold, and plans around the real you.

Try it before you do it

See the portfolio as it would look after a change — the new score, the new odds of reaching your goal — before you move a rupee.

Tax is counted first

Every suggestion is weighed against the tax you'd pay to make it. If the tax costs more than the problem, it isn't suggested.

One warning beats every score

Safety checks on everything you hold, from regulator action to auditor warnings. A strong score never cancels out a red flag.

It shows its working

Not just what to hold, but why — including the runner-up option, and exactly where it fell short.

Also: works in Hindi and by voice · a calm word on the days markets fall · a permanent record of everything Nxance has ever told you.

— WHO IT'S FOR

B2C

Retail Investors

Everyday investors who want to know if their portfolio actually works, and exactly how to fix it — via a subscription app (Health Check + Construction + NxanceLM, or NxanceLM alone).

B2B

Firms & Institutions

Boutique and large advisory firms, RIAs, VCs, PE firms, and institutions — offered as a white-labeled, subscription-based intelligence layer to strengthen their own client work.

— TEAM

Abhishek

Founder & CEO

Sets product vision and strategy; background in equity/derivatives investing and portfolio management.

Raghav Kripasthya

Co-Founder & CTO

Leads technical architecture and engineering across the platform's engines and infrastructure.

Deepesh Khemka

Co-Founder & CIO

Drives investment methodology and quant research; CFA Level III (pending).

Bhaskar Pandey

Co-Founder & COO

Runs operations, execution, and cross-functional delivery for the team.

Explainable, not a black box

A Number Guard traces every figure back to a computed engine result before it reaches a user.

Full-stack, not a single feature

Diagnosis, construction, and question-answering are all offered under one platform.

Built for scale from day one

One platform architecture serves individual retail investors and institutional desks alike.
