

AI-powered investment intelligence — see the true health of every asset you hold, or build a new one from scratch.

Nxance is an explainable, quantitative investment intelligence platform. Its deterministic engines diagnose existing portfolios and construct new ones, and its AI-powered terminal answers finance and market questions in plain language — backed by research-driven, proprietary models, not black-box predictions.

Retail app and white-labeled institutional tier

— HOW IT WORKS

ENGINE 01

Health Check

Diagnoses an existing portfolio using 26+ sub-engines — return, risk (VaR/CVaR/Sharpe/Sortino), diversification, cost leakage, goal-alignment, macro sensitivity, fraud/governance screening — output as a 0–100 score with rupee-quantified fixes.

ENGINE 02

Construction

Builds a new, diversified portfolio through 26+ sub-engines — Mean-Variance Optimization (Black-Litterman + Ledoit-Wolf) across equity, MF, FD, bonds, gold, ETFs, commodities and currency — with multiple candidate portfolios to compare.

ENGINE 03

NxanceLM

Two parts: a live market/news & portfolio Terminal, and an AI-powered Chat that answers finance, portfolio, and economy questions in plain language.

HEALTH CHECK

Already investing? Start here.

- 1 Upload what you hold**
Any mix of equity, MF, FD, bonds, gold, and more. Results in under 10 seconds.
- 2 Find the problems**
Is it earning enough? Riskier than it needs to be? Costing you more than it should?
- 3 Fix them, and keep it on track**
Keep what works, replace what doesn't. Watched daily, adjusted when markets move.

CONSTRUCTION

Starting fresh? Start here.

- 1 Tell us your goal**
What you're saving for, how long you have, and how big a fall you could live with.
- 2 Get a full portfolio, with reasoning**
Built across 8+ asset classes, with a reason for every holding and the runner-up shown too.
- 3 Stress-tested, then tracked**
Tested against five real market crashes before you commit — then watched daily.

No-Black-Box Guarantee: Health Check and Construction results always come from Nxance's own deterministic engines — 26+ sub-engines have to agree before anything reaches you. NxanceLM is a separate, AI-powered layer for answering questions, never a decision-maker.

— WHAT MAKES IT DIFFERENT

No made-up numbers

NxanceLM is never allowed to show a figure Nxance's own engines haven't worked out.

It goes by what you did

We look at when you actually bought and sold, and plan around the real you.

Try it before you do it

See the new score and new odds of reaching your goal before you move a rupee.

Tax is counted first

If the tax on a switch costs more than the problem it solves, it isn't suggested.

One warning beats every score

A strong score never cancels out a red flag from regulator action or auditor warnings.

It shows its working

Not just what to hold, but why — including the runner-up and where it fell short.

— WHO IT'S FOR

B2C

Retail Investors

Everyday investors who want to know if their portfolio actually works, and exactly how to fix it — via a subscription app.

B2B

Firms & Institutions

Boutique and large advisory firms, RIAs, VCs, PE firms, and institutions — offered as a white-labeled, subscription-based intelligence layer.

Explainable, not a black box

A Number Guard traces every figure back to a Diagnosis, construction, and question-computed engine result before it reaches a user.

Full-stack, not a single feature

Diagnosis, construction, and question-answering are all offered under one platform.

Built for scale from day one

One platform architecture serves individual retail investors and institutional desks alike.
