screens

APPLICATION A

Marketing Website

Public, unauthenticated — nxance.com

Marketing Website · 1

Landing Page

SCREEN

The public entry point positions Nxance as institutional-grade intelligence for retail investors — leading with trust signals before asking for a commitment.

WHAT TO NOTICE

- Hero CTA: Start Free / Watch Demo
- Trust badges — SEBI Registered, AES-256, ISO 27001
- ₹99 single-report entry price, ahead of the subscription ask

APPLICATION B

Investor App

Authenticated product — nxance.ai

Onboarding · 4

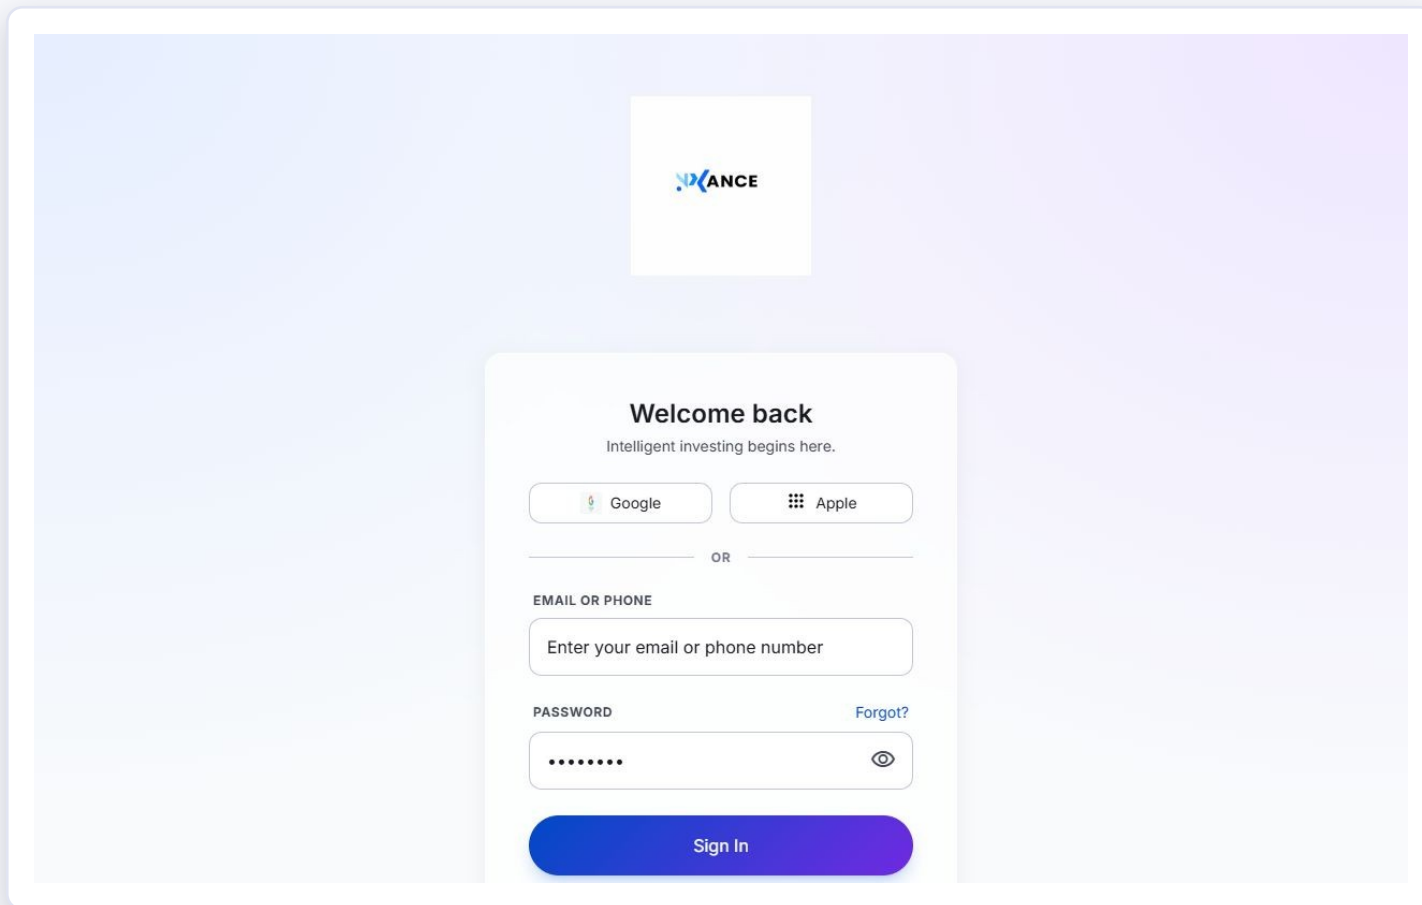

Dashboard & Account · 2

Health Check · 10

Portfolio Builder · 4

Nxance AI · 2

Sign In

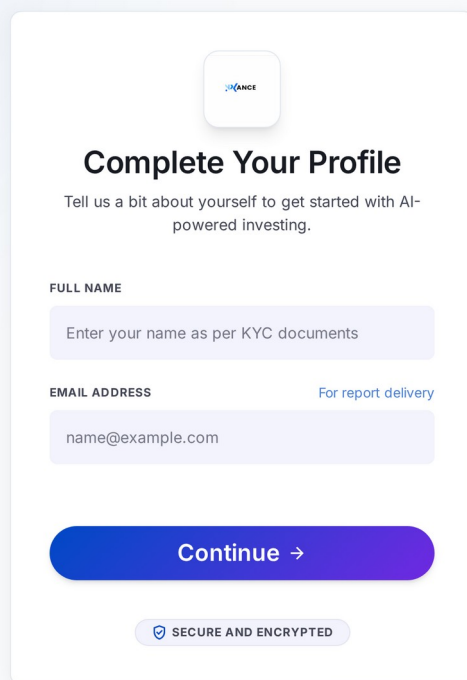

SCREEN

A minimal, familiar auth screen — social login or email/password — keeps the first click as low-friction as possible.

WHAT TO NOTICE

- Google & Apple single sign-on
- Email / phone + password fallback
- “Intelligent investing begins here” tagline

Complete Your Profile

Complete Your Profile

Tell us a bit about yourself to get started with AI-powered investing.

FULL NAME

Enter your name as per KYC documents

EMAIL ADDRESS For report delivery

name@example.com

Continue →

SECURE AND ENCRYPTED

© 2024 Nxance AI. SEBI Registered Investment Advisor.

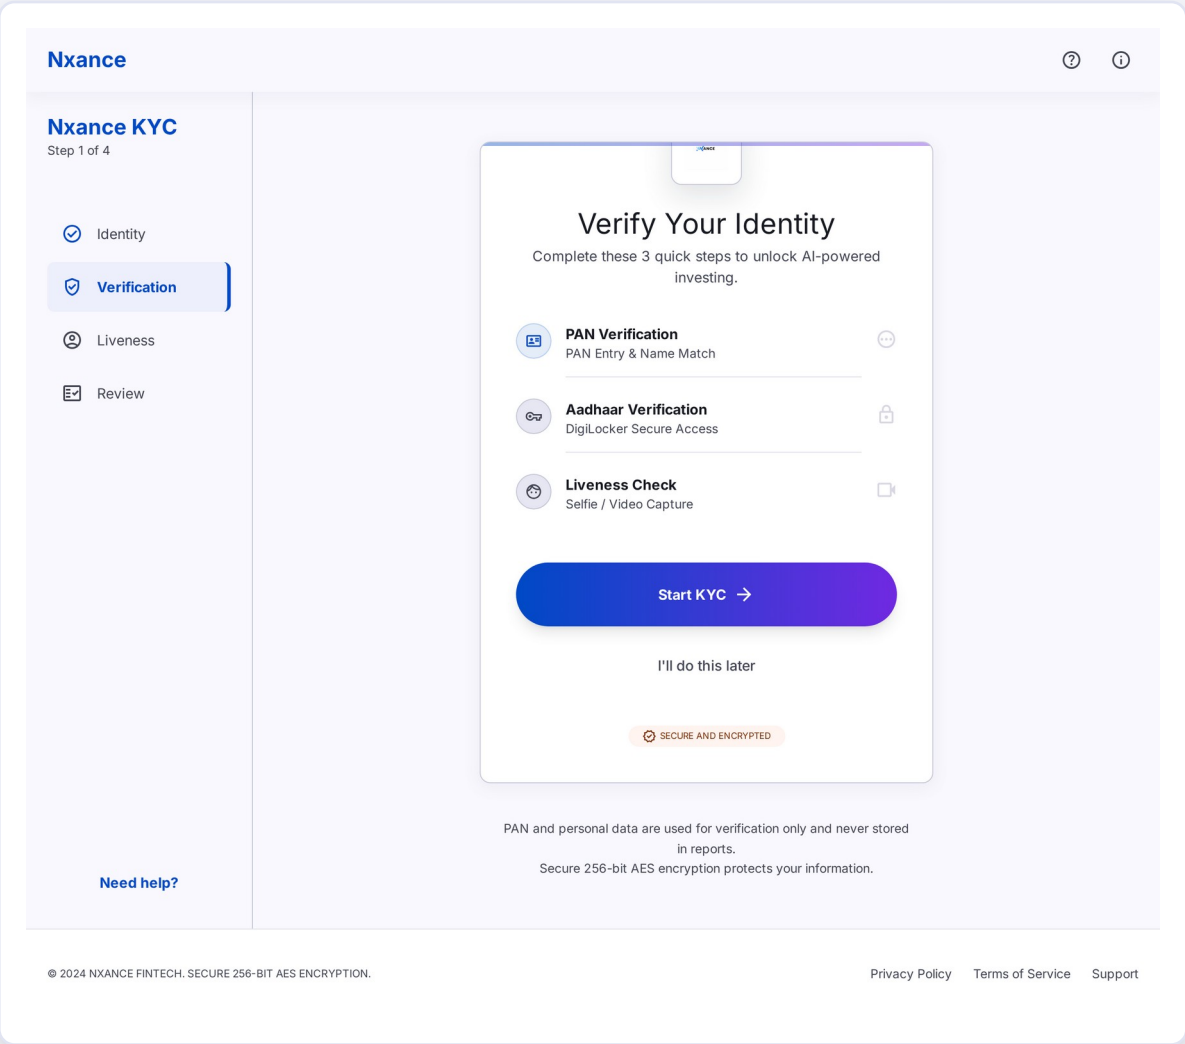

SCREEN

Just two fields — name and email — before anything else is asked. Deeper KYC is deferred to its own dedicated step.

WHAT TO NOTICE

- Full name, as per KYC documents
- Email address, flagged for report delivery
- Single primary CTA: Continue

KYC — Verify Your Identity

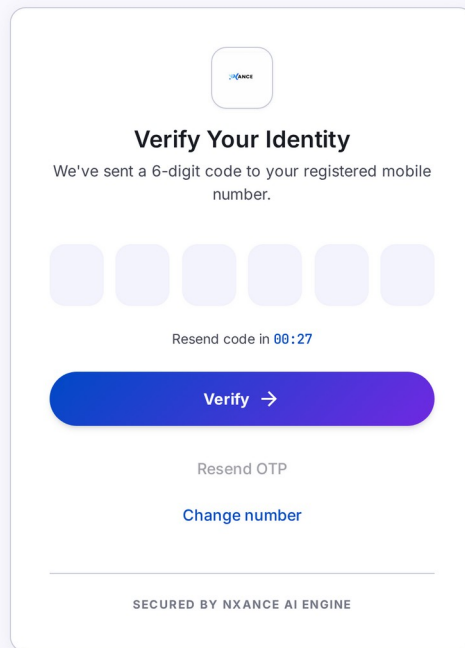

SCREEN

A compliance-ready identity flow — PAN, Aadhaar via DigiLocker, and a liveness check — with an explicit skip path so a user can preview the product first.

WHAT TO NOTICE

- Step 1 of 4 in the KYC journey
- PAN · Aadhaar (DigiLocker) · Liveness check
- “I’ll do this later” deferred-KYC option

OTP Verification

The mockup shows a white card on a light purple background. At the top is the Nxance logo. Below it is the title 'Verify Your Identity' and a message: 'We've sent a 6-digit code to your registered mobile number.' There are six empty square boxes for the code. Below the boxes is a countdown timer: 'Resend code in 00:27'. A large blue button with 'Verify →' is centered. Below the button are links for 'Resend OTP' and 'Change number'. At the bottom, a line of text reads 'SECURED BY NXANCE AI ENGINE'.

© 2024 Nxance AI. SEBI Registered Investment Advisor.

[Terms](#) [Privacy](#) [Contact](#)

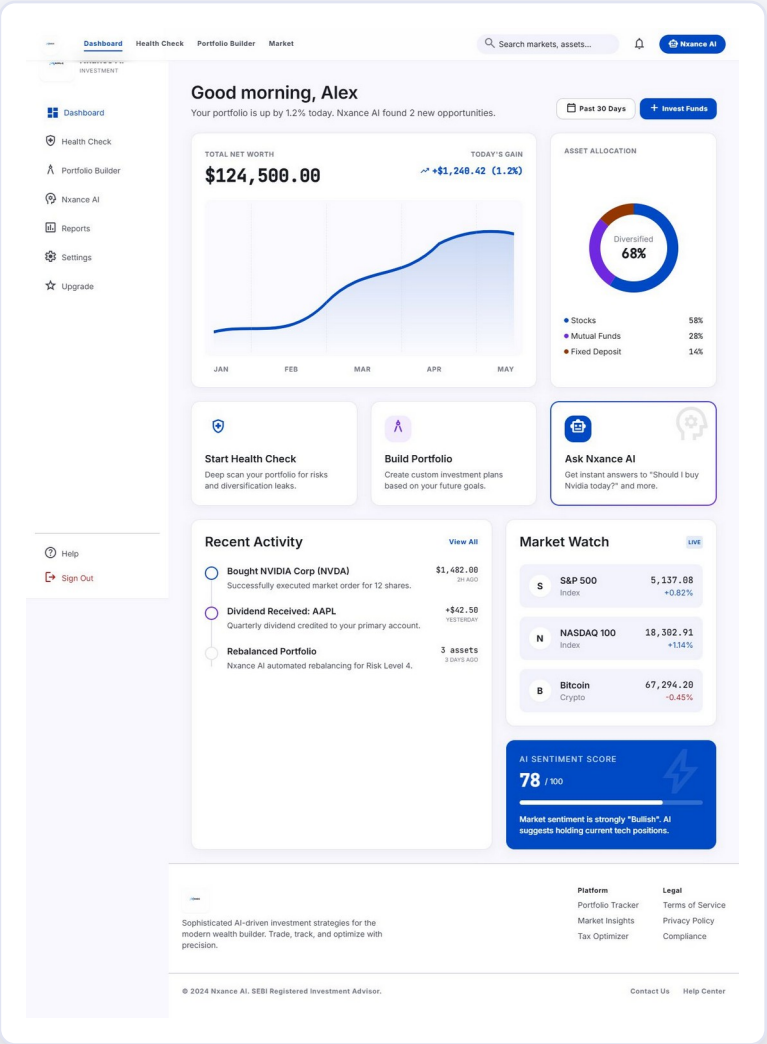

SCREEN

A standard 6-digit mobile OTP step, carried through with the same branding and reassurance language as the rest of the funnel.

WHAT TO NOTICE

- 6-digit code with live countdown
- Resend OTP / Change number
- “Secured by Nxance AI Engine” trust line

Dashboard

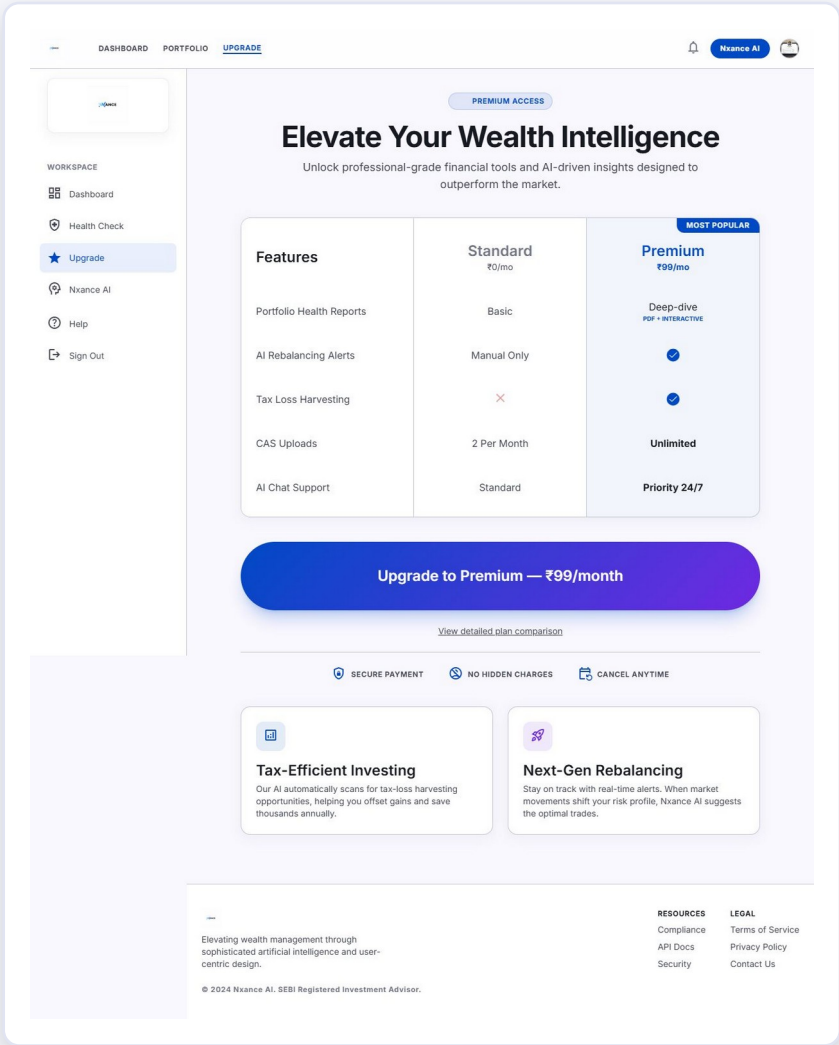

SCREEN

Home base after onboarding — net worth, allocation, and one-tap entry points into all three core engines: Health Check, Portfolio Builder, and Nxance AI.

WHAT TO NOTICE

- Total net worth, today's gain, and a 5-month trend line
- Asset allocation donut — Stocks / Mutual Funds / Fixed Deposit
- AI Sentiment Score and live market watch

Upgrade to Premium

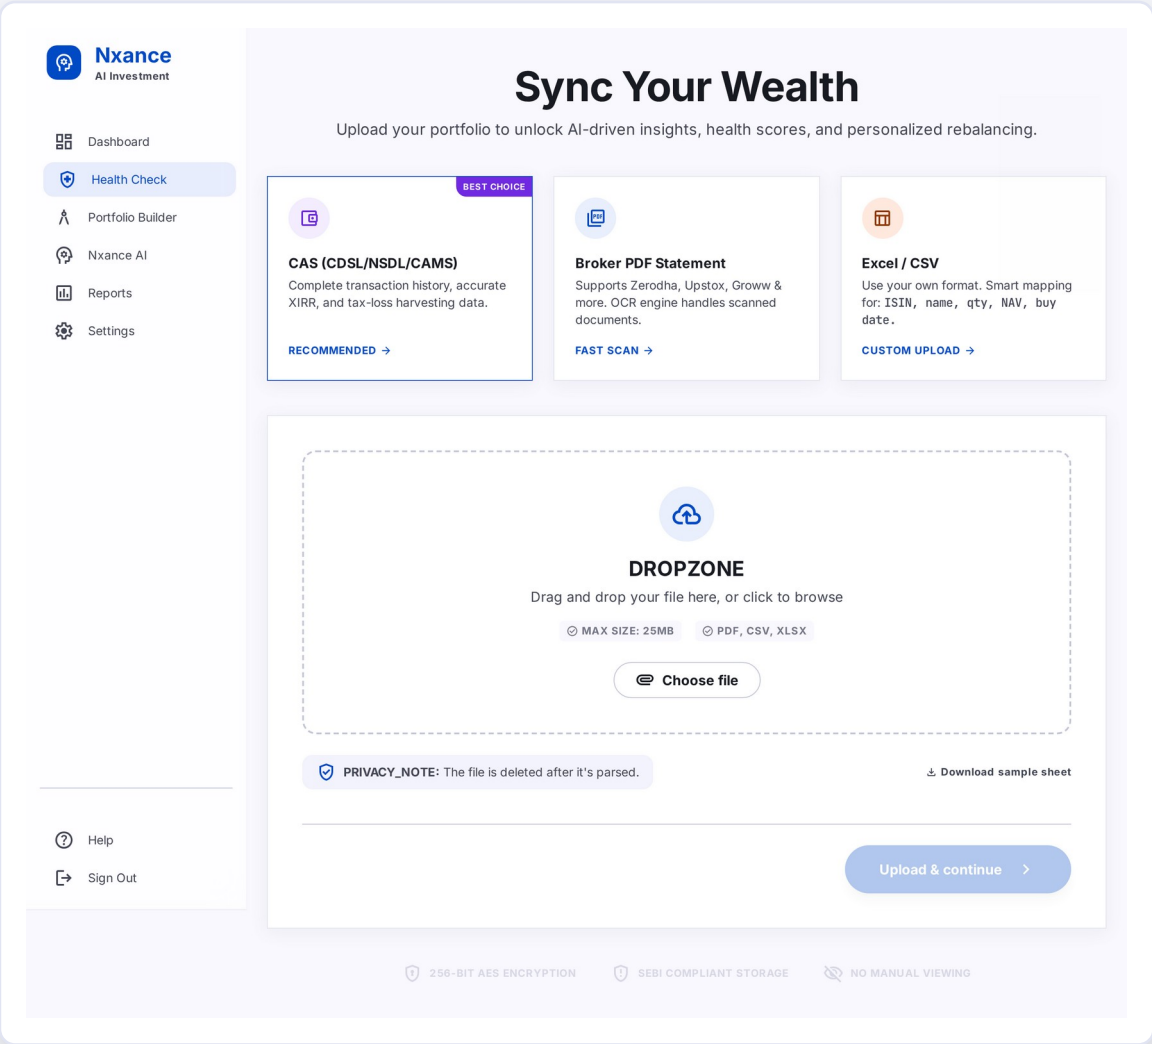

SCREEN

The subscription upsell sits behind the ₹99 one-off unlocks — the same tax-loss-harvesting hook, now framed as an ongoing tier rather than a single report.

WHAT TO NOTICE

- Standard (free) vs Premium (₹99/mo) feature comparison table
- Unlimited CAS uploads, automated rebalancing, priority AI chat
- Secure payment, no hidden charges, cancel anytime

Sync Your Wealth

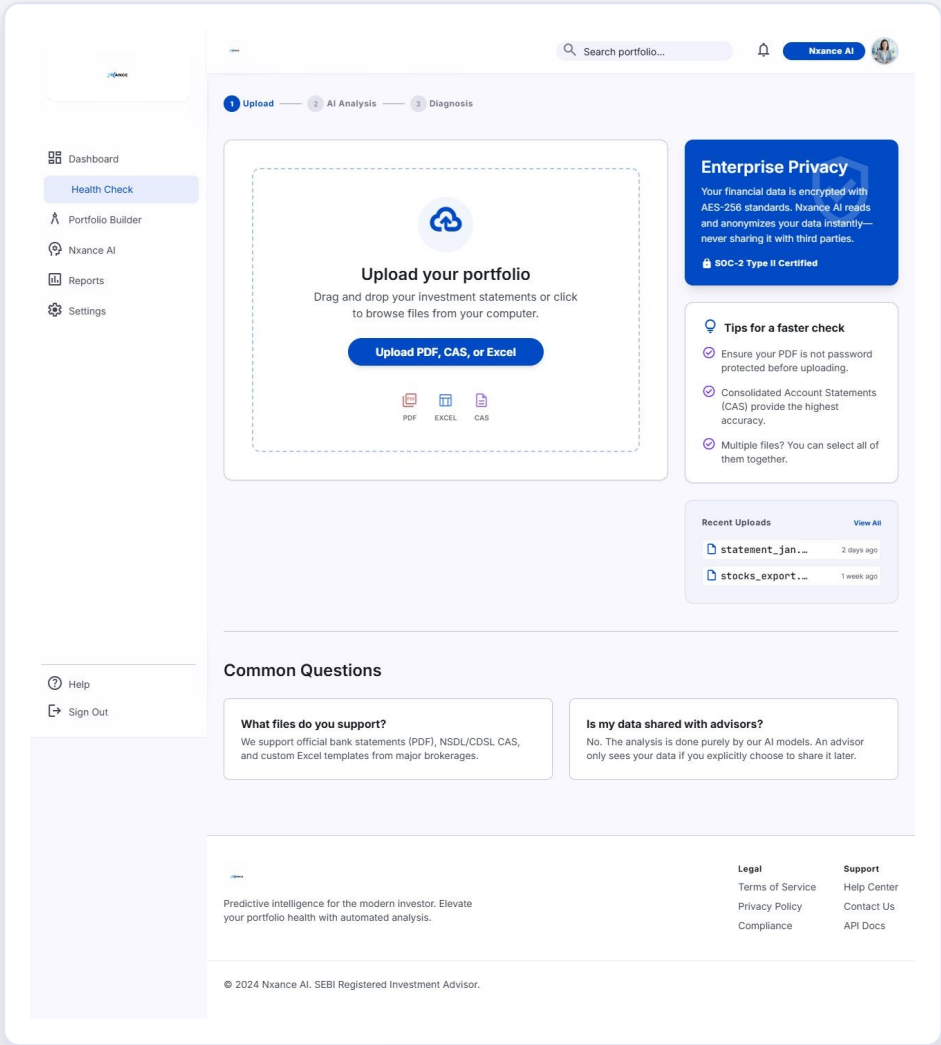

SCREEN

Entry point to the Health Check engine. CAS is positioned as the recommended path for accurate XIRR; broker PDFs and Excel/CSV cover the rest.

WHAT TO NOTICE

- CAS (CDSL/NSDL/CAMS) — marked “Best Choice”
- Broker PDF (OCR) and Excel/CSV with smart column mapping
- Explicit privacy note: file deleted after parsing

Upload Your Portfolio

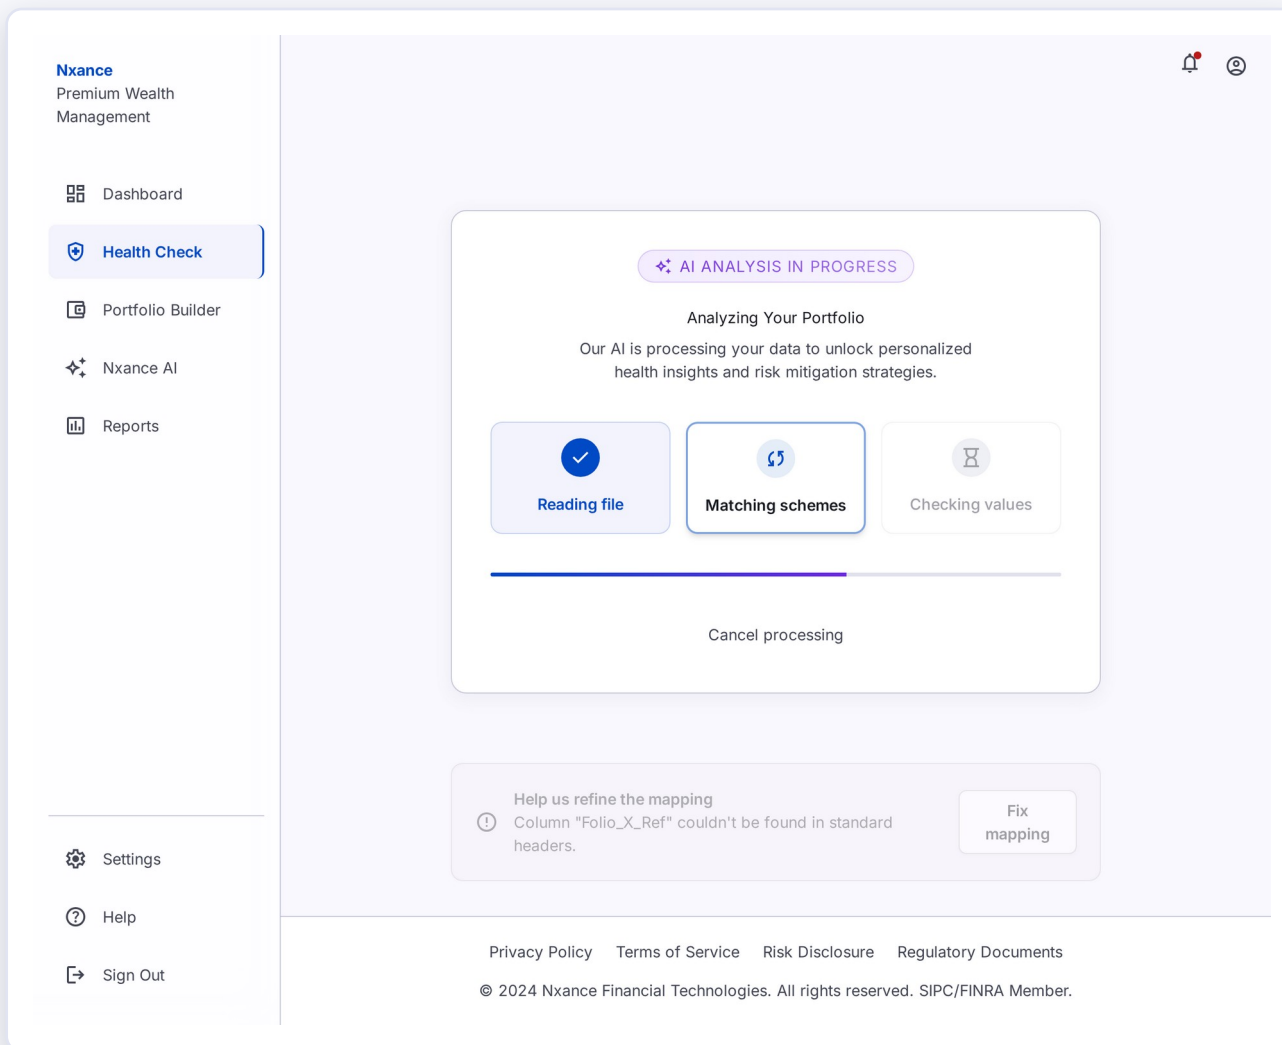

SCREEN

An alternate upload screen framed inside the 3-step Health Check journey — Upload → AI Analysis → Diagnosis — with reassurance content surfaced up front.

WHAT TO NOTICE

- Step 1 of 3: Upload → AI Analysis → Diagnosis
- Enterprise Privacy panel: AES-256, SOC-2 Type II
- Tips for a faster check + recent uploads

AI Analysis In Progress

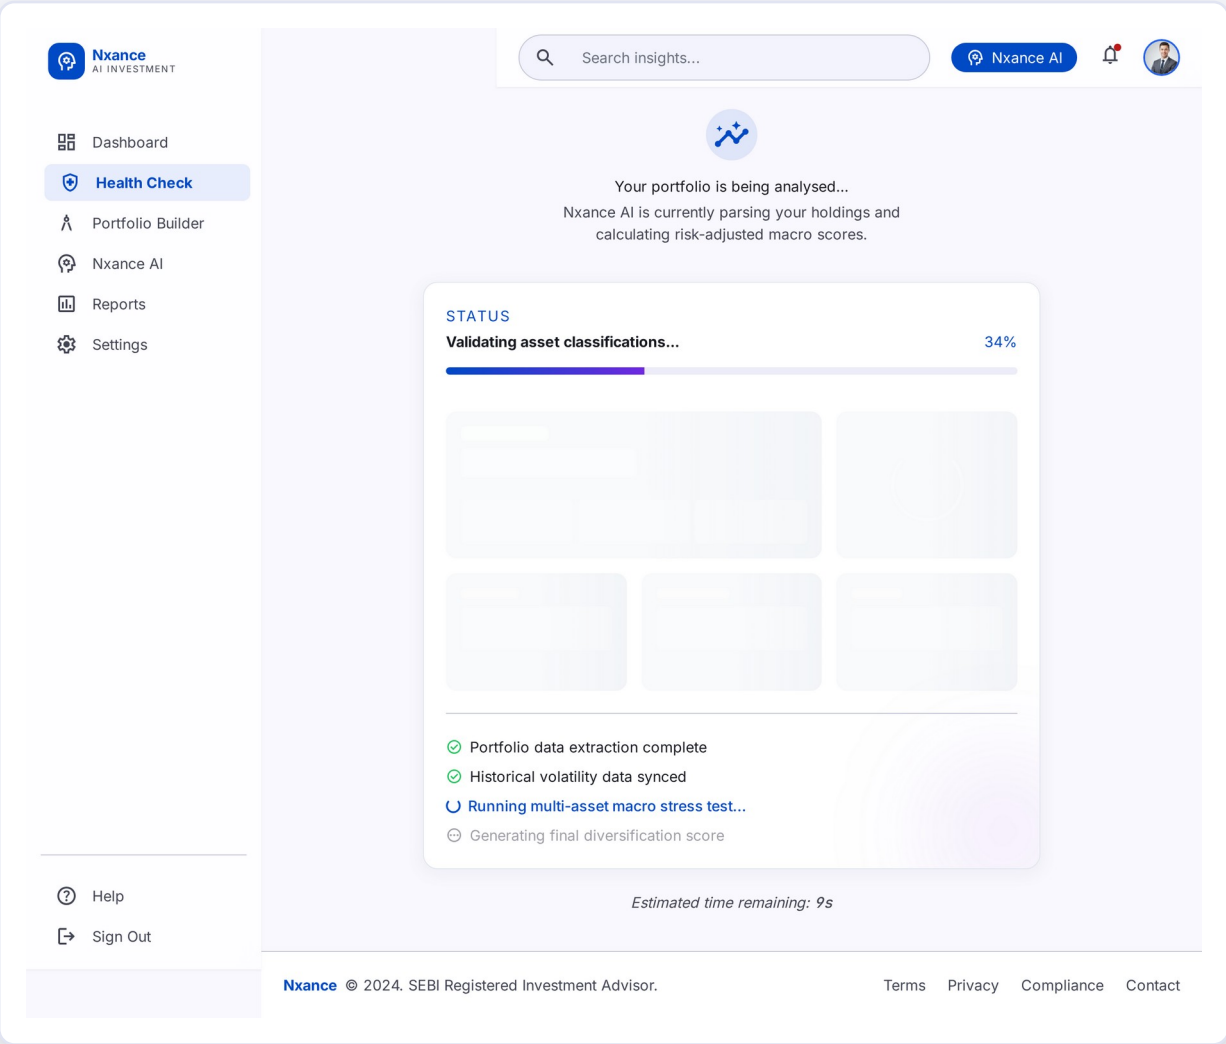

SCREEN

Processing is broken into visible stages rather than a single spinner, and data-quality issues are surfaced immediately instead of failing silently.

WHAT TO NOTICE

- Reading file → Matching schemes → Checking values
- Live progress bar with cancel option
- Inline flag: unmapped column "Folio_X_Ref", with Fix Mapping

Your Portfolio Is Being Analysed

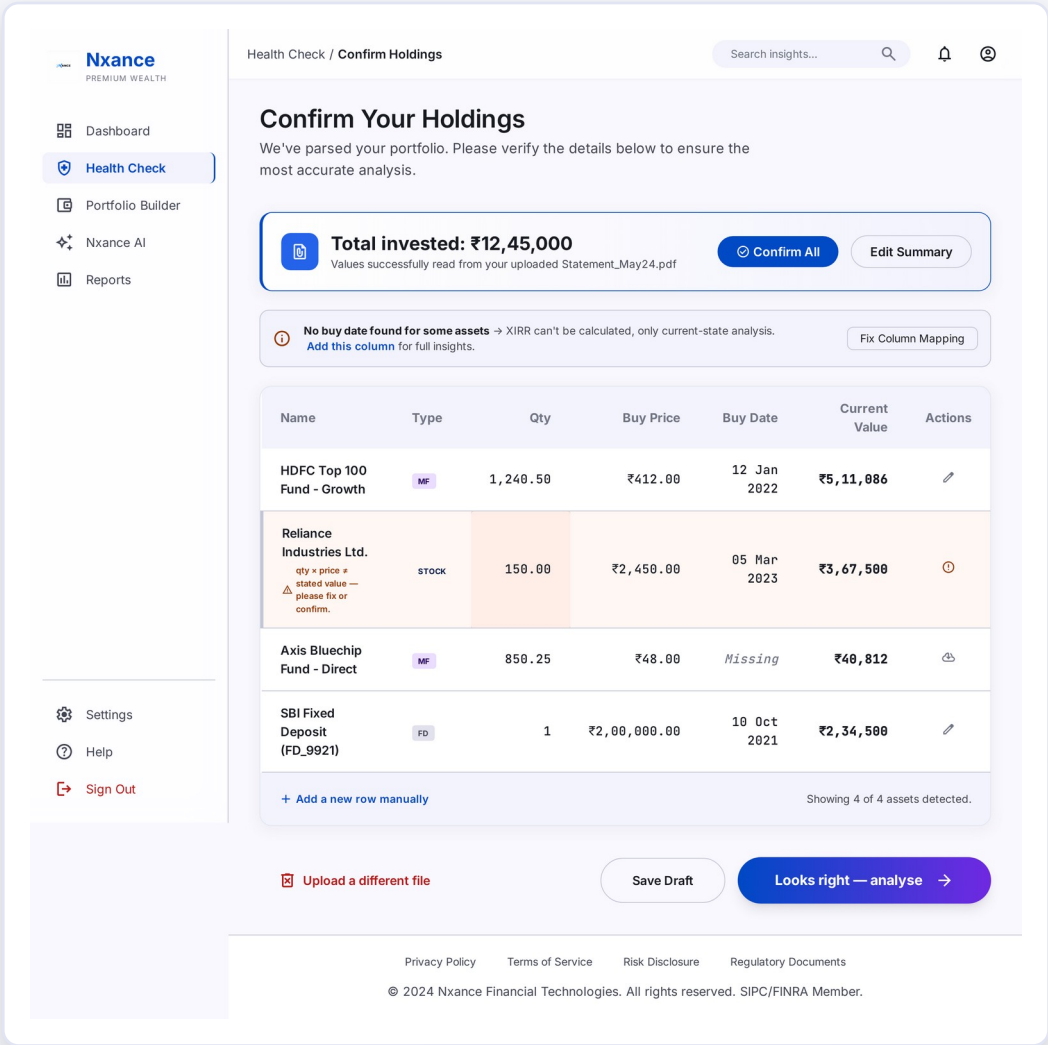

SCREEN

A second processing state, reached once inside the full app shell — the same pattern of visible sub-steps and time estimates carries through after login.

WHAT TO NOTICE

- Live status line: “Validating asset classifications... 34%”
- Checklist: extraction complete → volatility synced → macro stress test running
- Estimated time remaining shown throughout

Confirm Your Holdings

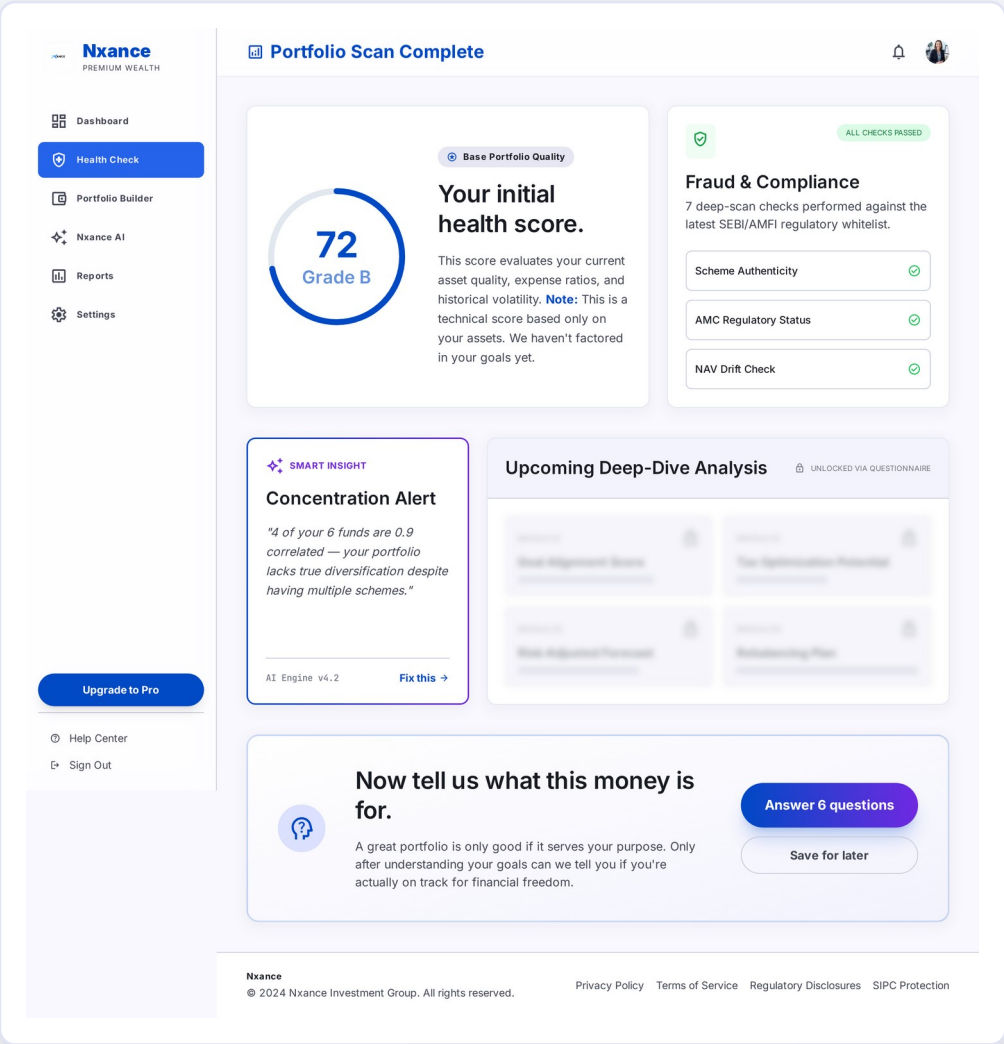

SCREEN

A human-in-the-loop checkpoint: the user confirms parsed holdings and resolves flagged discrepancies before the AI produces its diagnosis — consistent with Nxance’s no-black-box positioning.

WHAT TO NOTICE

- 4 assets parsed — total invested ₹12,45,000
- Flags a qty × price mismatch and a missing buy date
- Missing dates warn that XIRR can’t be calculated yet

Portfolio Scan Complete

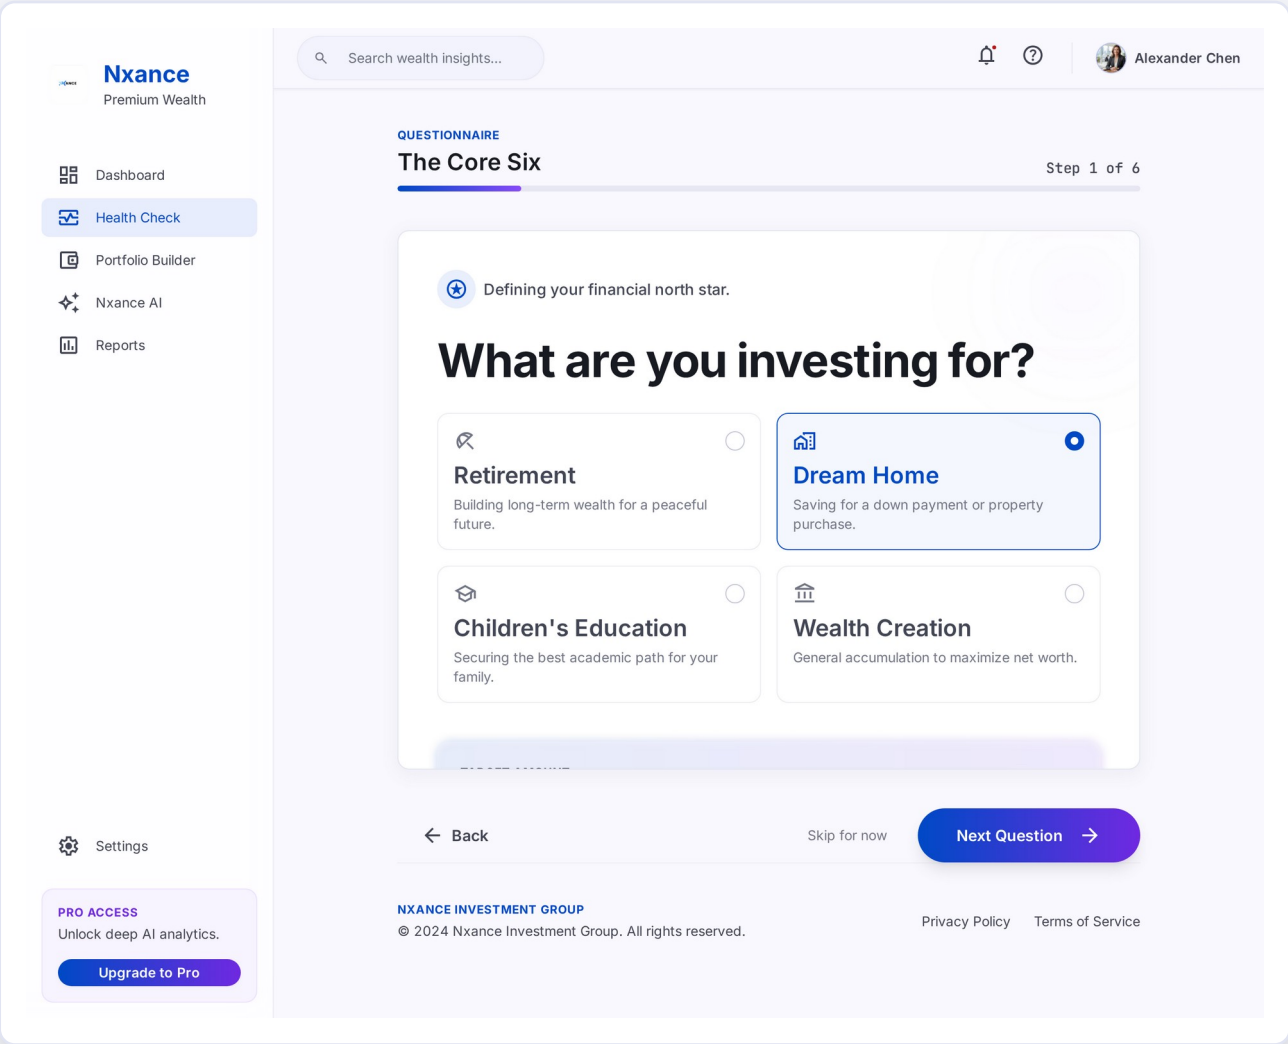

SCREEN

The first diagnosis: a 72 / Grade B score explicitly caveated as asset-quality-only until the user’s goals are known — deeper analysis stays gated behind a short questionnaire.

WHAT TO NOTICE

- Base Portfolio Quality score, with a visible “goals not yet factored” note
- Fraud & Compliance: 7 checks passed against SEBI/AMFI data
- Smart Insight: concentration alert on fund correlation

The Core Six — Goal Questionnaire

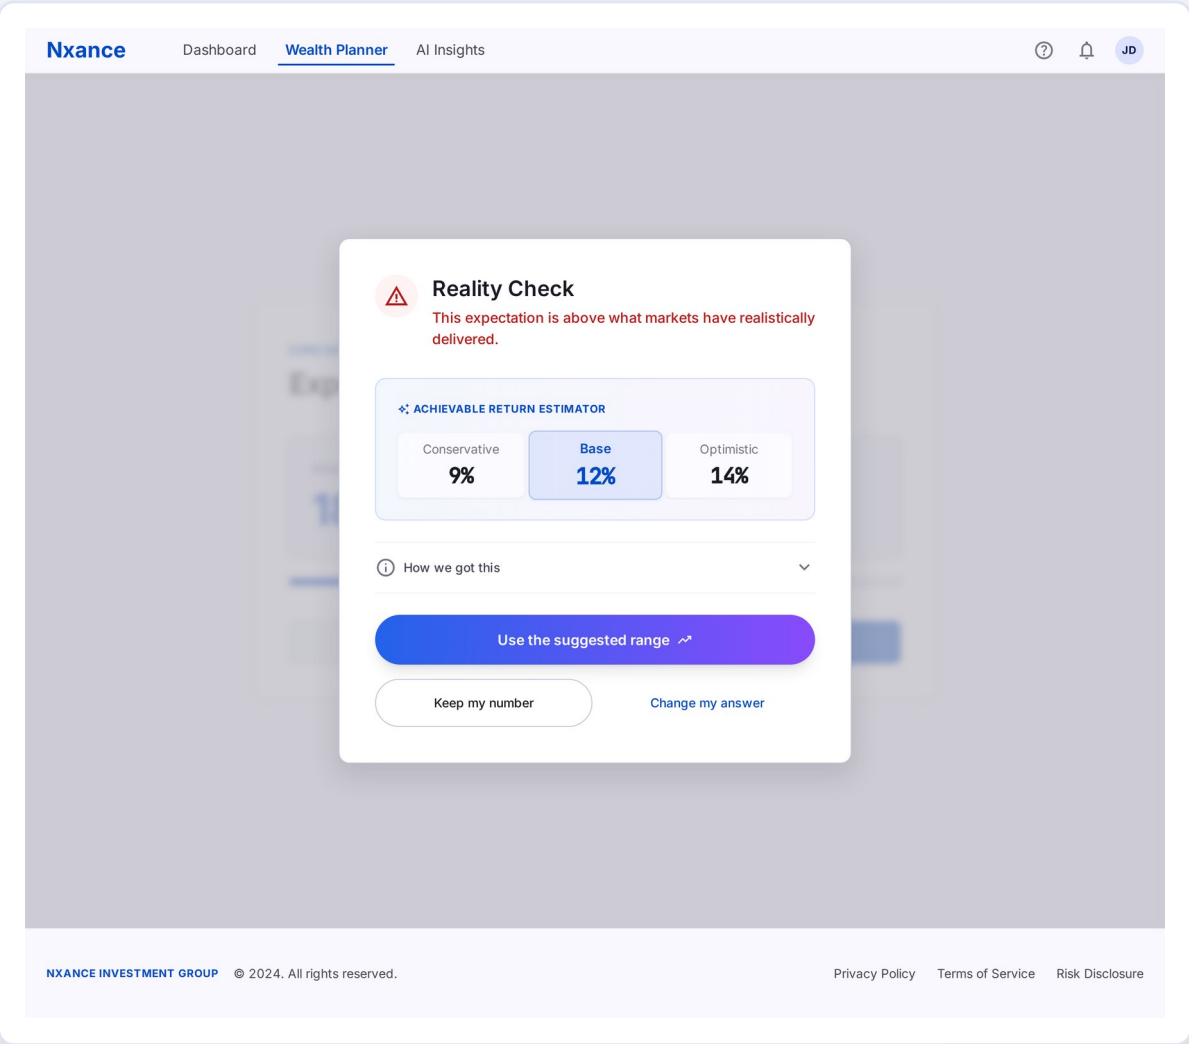

SCREEN

The 6-question flow gating the deep-dive analysis promised on the Scan Complete screen, starting with the investor’s primary objective.

WHAT TO NOTICE

- Step 1 of 6: “What are you investing for?”
- Retirement · Dream Home · Children’s Education · Wealth Creation
- Skip-for-now option alongside Back / Next

Reality Check

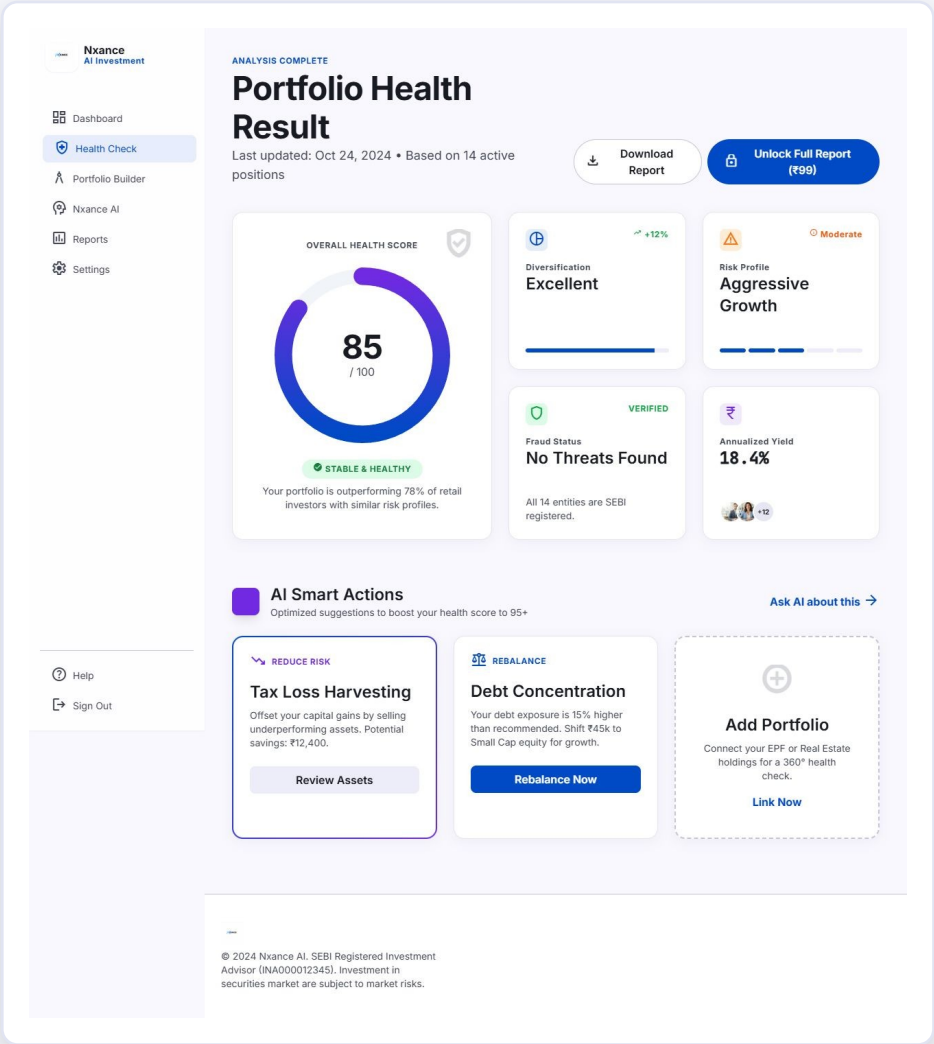

SCREEN

When a stated return expectation exceeds historical norms, the engine interrupts with a Reality Check instead of silently accepting an unrealistic number.

WHAT TO NOTICE

- Achievable Return Estimator: Conservative 9% • Base 12% • Optimistic 14%
- “How we got this” methodology disclosure, expandable
- Use the suggested range • Keep my number • Change my answer

Portfolio Health Result

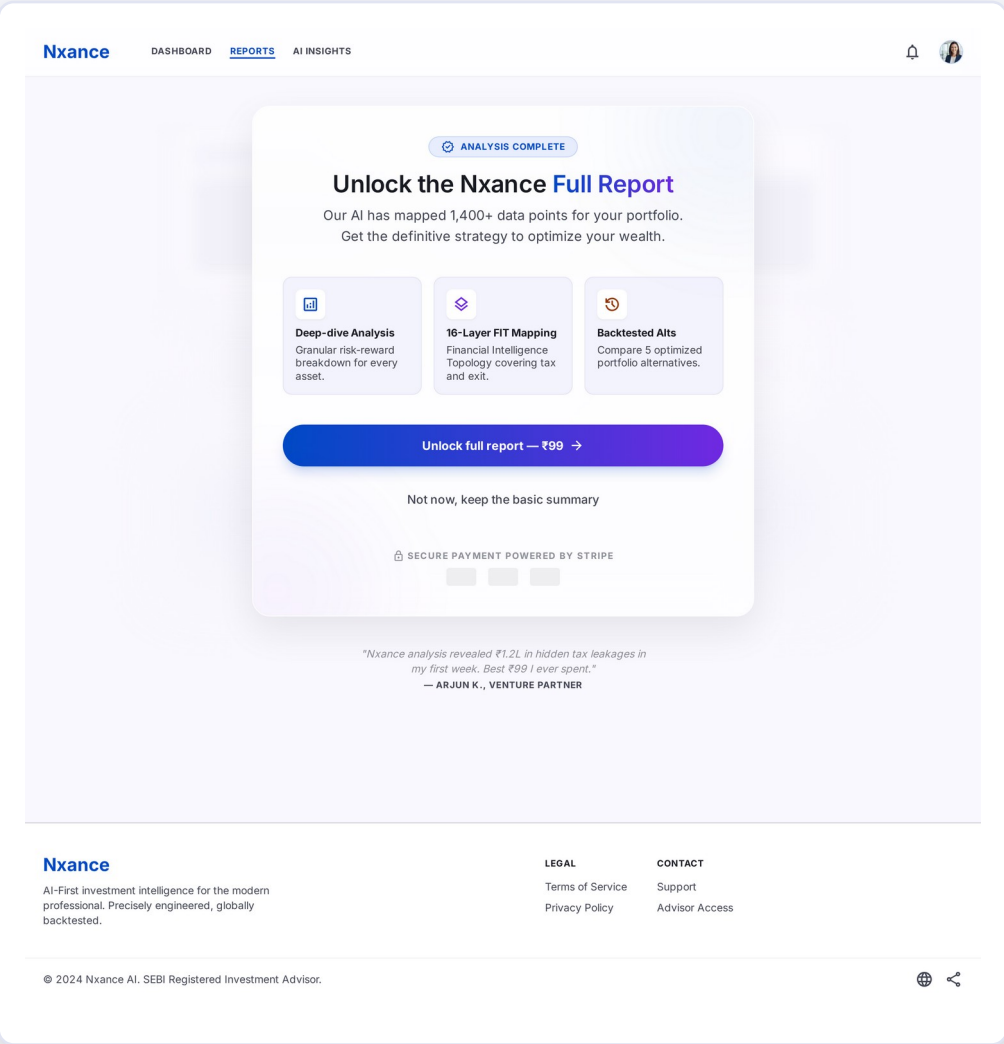

SCREEN

The fuller diagnosis once goals are known — a composite score plus concrete, quantified next actions rather than generic advice.

WHAT TO NOTICE

- 85 / 100, “Stable & Healthy,” outperforming 78% of similar retail investors
- Diversification, Risk Profile, Fraud Status, and Annualized Yield in one view
- AI Smart Actions: Tax Loss Harvesting (₹12,400 potential) and Rebalancing

Unlock the Full Report

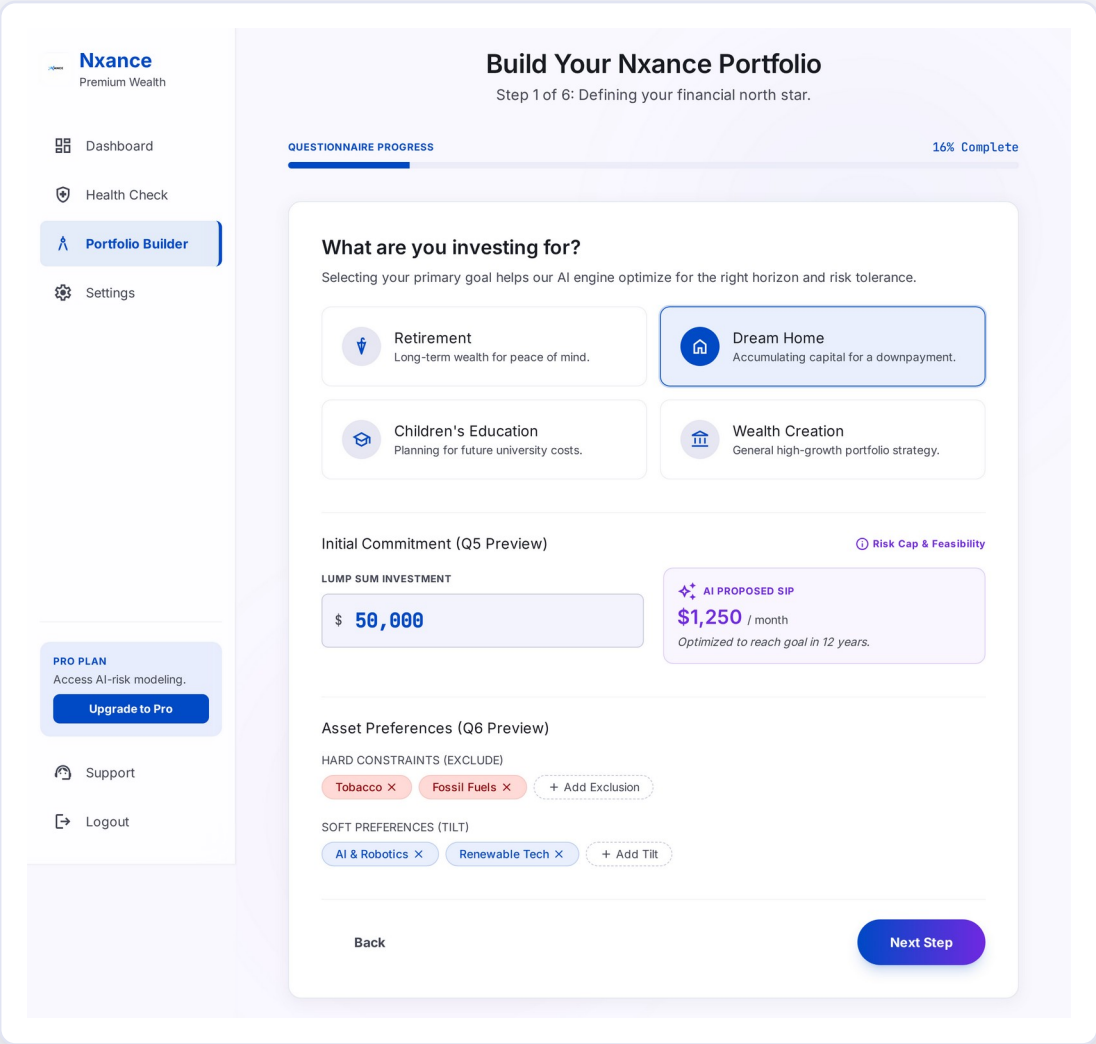

SCREEN

The monetization moment for Health Check — a single ₹99 unlock, an explicit downgrade path, and a testimonial doing double duty as social proof.

WHAT TO NOTICE

- “1,400+ data points” framing: Deep-dive Analysis, 16-Layer FIT Mapping, Backtested Alts
- “Not now, keep the basic summary” — no forced upsell
- Secure payment via Stripe, investor-style testimonial quote

Build Your Nxance Portfolio

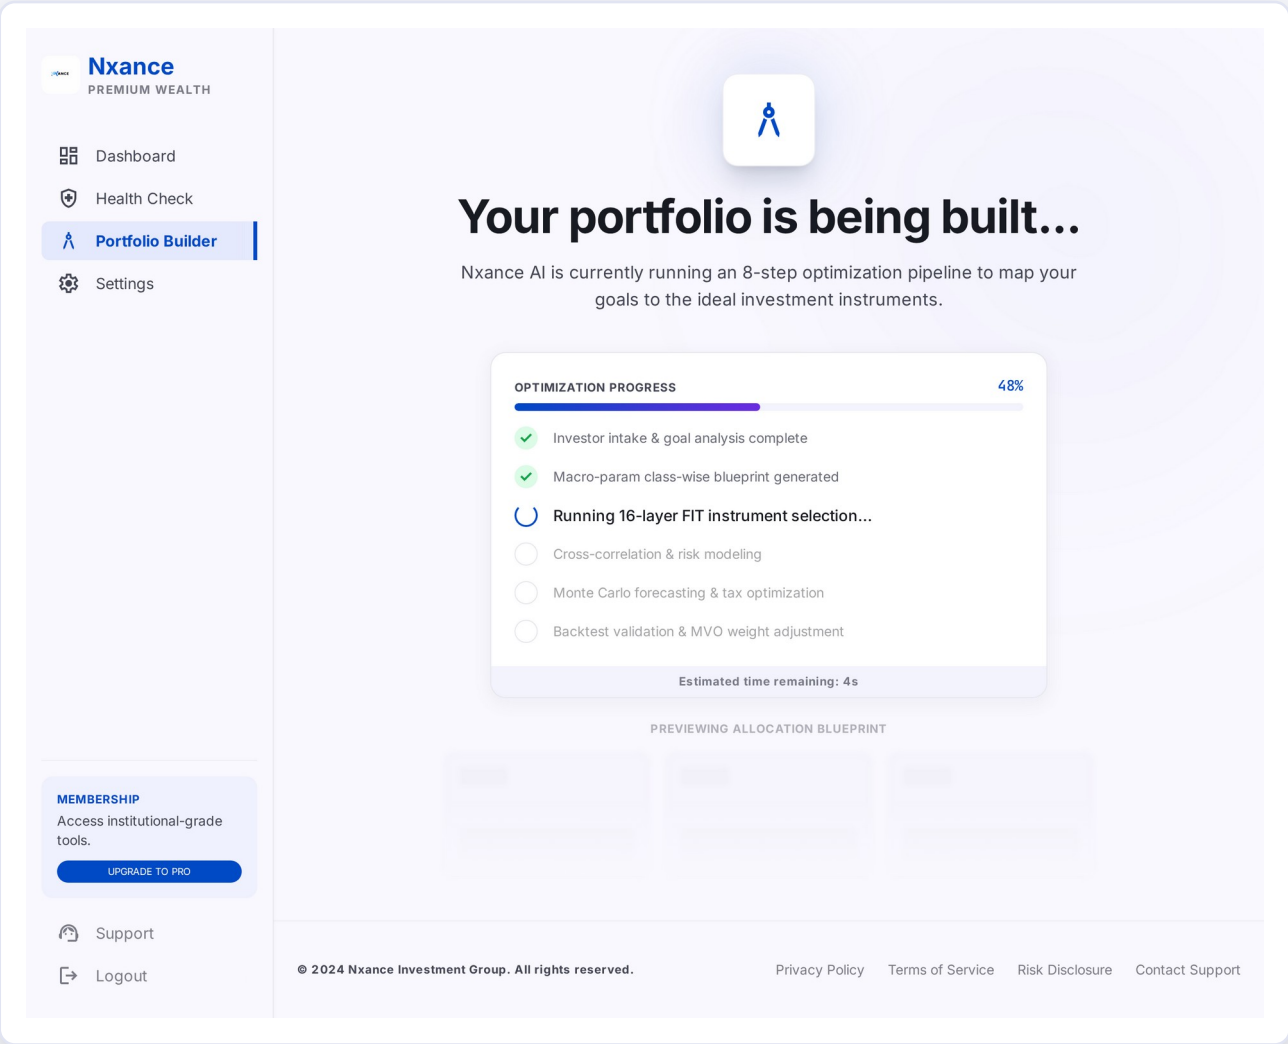

SCREEN

Construction’s own goal-first questionnaire — notably front-loading commitment amount and values-based exclusions well ahead of asset selection.

WHAT TO NOTICE

- Step 1 of 6, same 4-goal pattern as Health Check’s Core Six
- Initial Commitment preview: lump sum + AI-proposed SIP with a horizon estimate
- Asset Preferences preview: hard exclusions and soft sector tilts

Your Portfolio Is Being Built

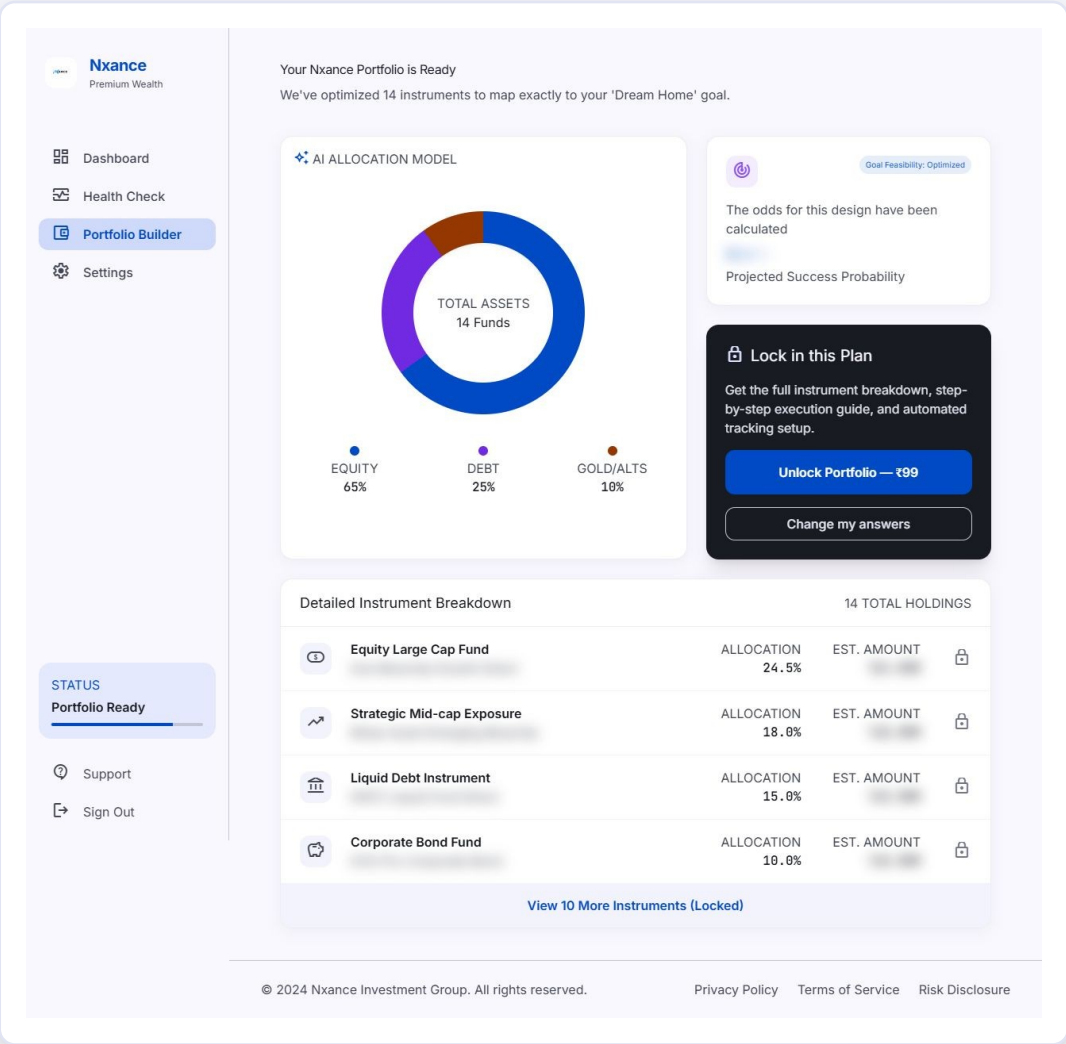

SCREEN

Construction's processing screen mirrors Health Check's transparency pattern — the same 16-Layer FIT Mapping referenced on the paywall is shown running live here.

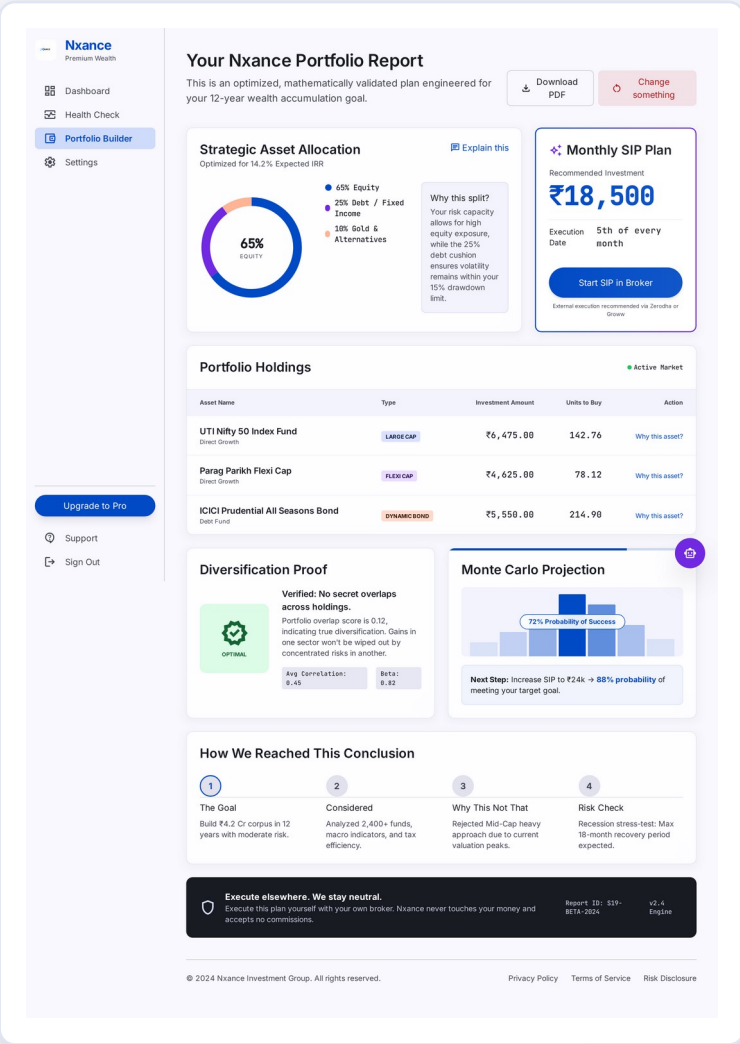

WHAT TO NOTICE

- 8-step optimization pipeline with live progress percentage
- Steps shown: intake → macro blueprint → FIT selection → correlation → Monte Carlo → backtest
- Estimated time remaining, same pattern as Health Check's processing screen

Your Nxance Portfolio Is Ready

Your Nxance Portfolio Report

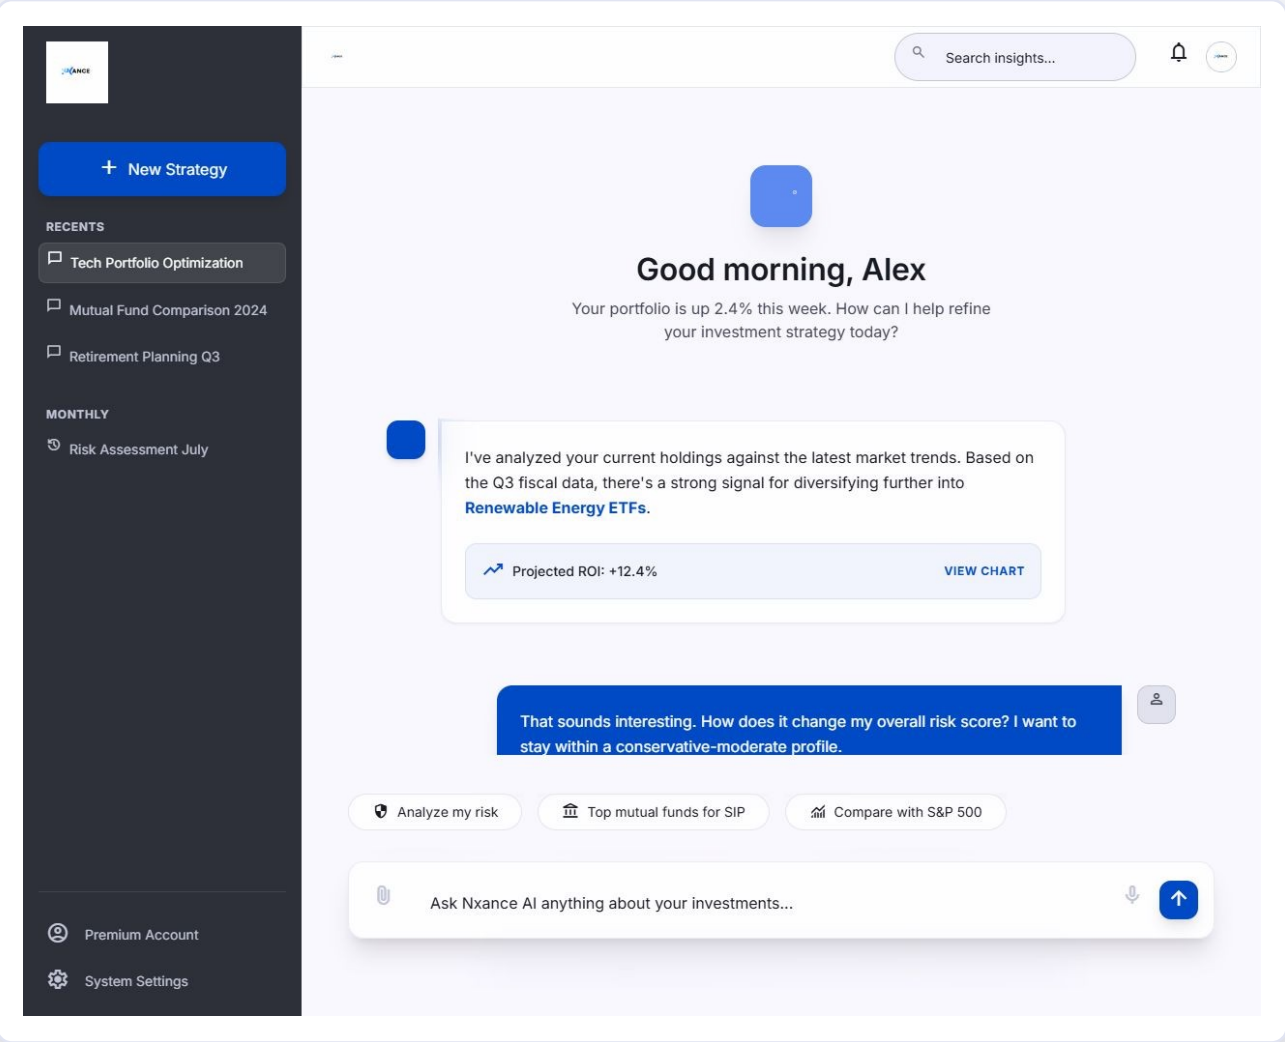

SCREEN

The unlocked report is the product's centerpiece: every number is explained, the Monte Carlo panel quantifies a specific lever to pull, and a closing note reiterates Nxance never executes trades.

WHAT TO NOTICE

- Strategic Asset Allocation with a "Why this split?" explainer and Monthly SIP Plan
- Portfolio Holdings table, each row with a "Why this asset?" link
- Monte Carlo Projection: 72% success probability, with a suggested SIP increase to 88%

Nxance AI — Chat Home

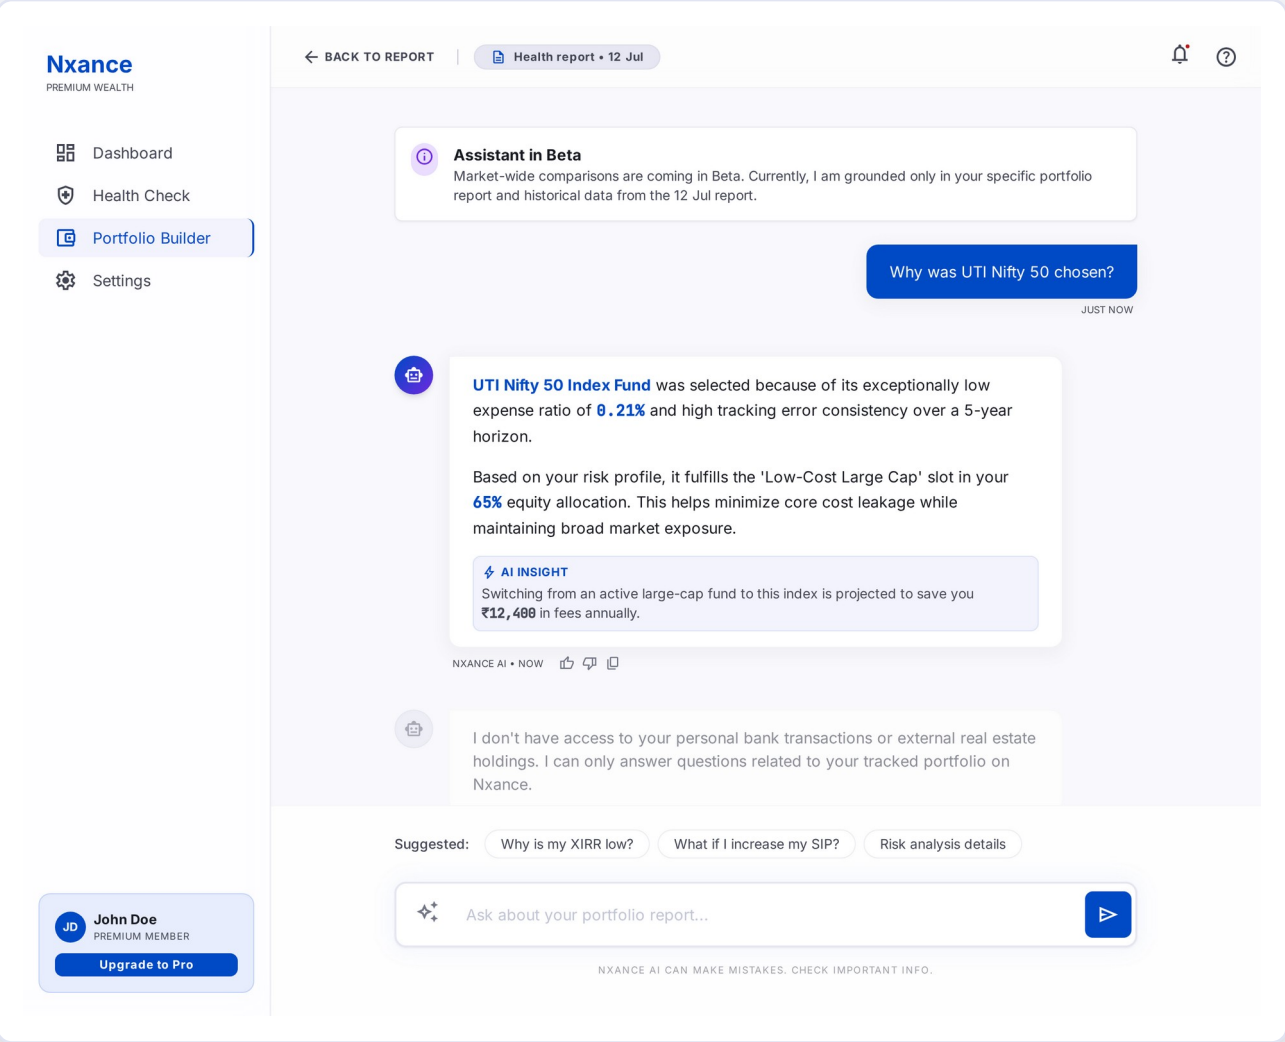

SCREEN

NxanceLM's general chat surface — persistent conversation history, proactive suggestions surfaced inline, and one-click follow-up prompts to keep the conversation moving.

WHAT TO NOTICE

- Recents and a Monthly section for saved conversations
- Sample exchange proposing a Renewable Energy ETF tilt with a projected ROI
- Quick-start prompts: Analyze my risk, Top mutual funds for SIP, Compare with S&P 500

Nxance AI — Explaining a Report

SCREEN

The Number Guard principle made visible: every figure the assistant cites traces back to the report it's grounded in, and it declines to answer beyond what it can verify.

WHAT TO NOTICE

- Answer grounded explicitly in a named report ("Health report • 12 Jul")
- Cites expense ratio and allocation-slot logic behind a fund choice
- Explicitly declines an out-of-scope question about external accounts

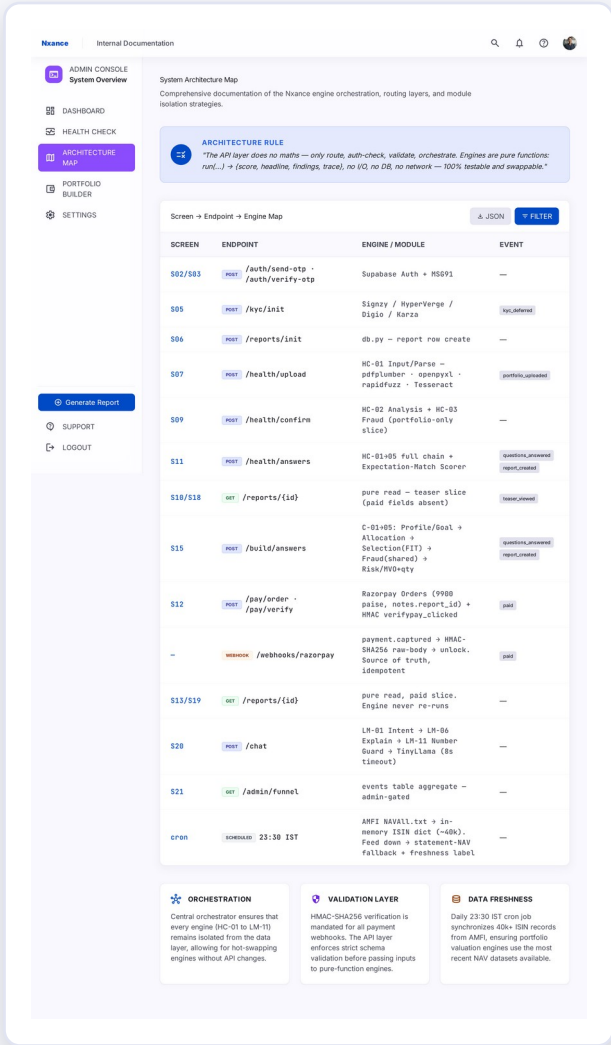

APPLICATION C

Admin Console

Internal — founder & engineering tooling

Admin Console · 2

System Architecture Map

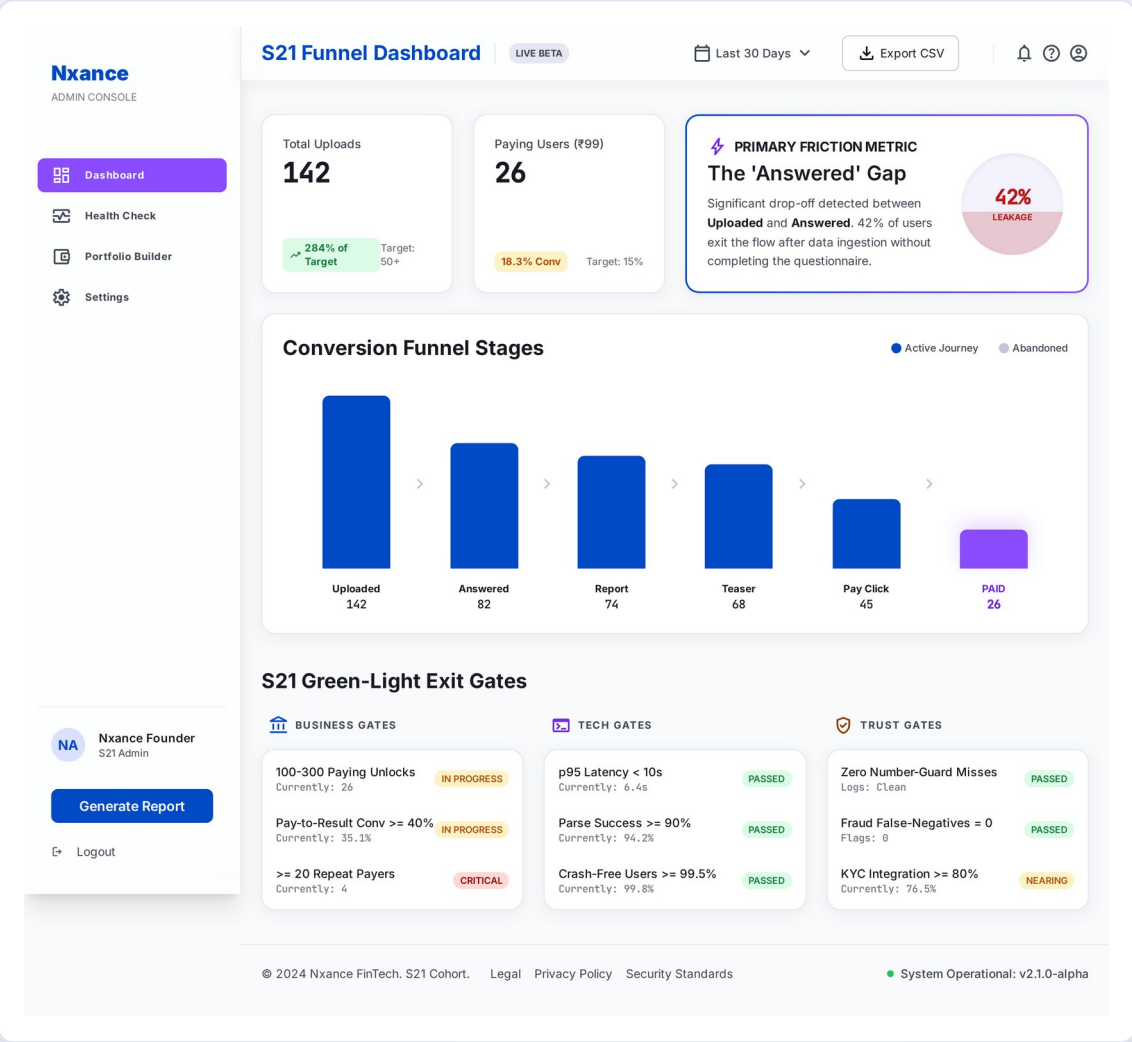

SCREEN

Not user-facing — the internal engineering reference mapping every screen to its API endpoint and engine, reinforcing the same orchestration and Number Guard principles from the inside.

WHAT TO NOTICE

- Architecture rule: the API layer only routes, auth-checks, and validates — engines are pure functions
- Full Screen → Endpoint → Engine table, from auth through payment webhooks
- Orchestration, validation, and daily NAV data-freshness notes

S21 Funnel Dashboard

SCREEN

The founder-facing metrics view behind the funnel screens shown earlier — real conversion numbers against launch-gate targets, including the exact drop-off point the team is working to fix.

WHAT TO NOTICE

- 142 uploads (284% of target), 26 paying users at ₹99 (18.3% conversion)
- Primary friction metric: a 42% drop-off between Uploaded and Answered
- Business, Tech, and Trust launch gates tracked with pass/in-progress/critical status
