

AI-Powered Investment Intelligence Across Every Asset Class

Nxance finds hidden losses and diversification gaps across stocks, mutual funds, FDs, commodities, and currency, builds optimal multi-asset portfolios from scratch, and explains everything in plain language using our own purpose-built AI model — a category that does not exist in India today.

THE PROBLEM

- 50M+ Indians invest across stocks, mutual funds, FDs, commodities, and currency with no unified view of whether their money is actually working together.
- Investors unknowingly lose Rs.5,000-25,000/year to poor fund selection, hidden commissions, and concentrated, undiversified holdings across asset classes.
- The only alternative is multiple separate advisors per asset class — expensive, disconnected, and out of reach for mass retail investors.

OUR SOLUTION

- Upload a full portfolio across stocks, mutual funds, FDs, commodities, and currency holdings — get a unified analysis with exact rupee impact of every issue in under 60 seconds.
- A construction engine builds a diversified, optimised multi-asset portfolio from scratch, matched to goal, timeline, and risk profile.
- Our own AI model explains every finding and recommendation in plain, jargon-free language — no existing Indian fintech does this end-to-end.

PRODUCT — THREE CORE ENGINES

Health Check Engine

Analyses, diversifies, and scores portfolios across stocks, mutual funds, FDs, commodities, and currency — finds hidden cost, risk, and concentration issues with exact Rs. impact.

Construction Engine

Builds an optimised, diversified portfolio across all asset classes from scratch — allocation, instrument selection, execution plan matched to goal.

NxanceLM (Own AI)

Purpose-built AI model translates every recommendation into plain Hinglish/English — and answers any finance question, live.

WHERE WE ARE — WORKING DEMO, PRE-SEED

- We have built a working proof of concept — demoable today — that validates the core Health Check and Construction engine technology end-to-end.
- The POC is a demo, not yet a buyable product — it proves the engines work, but isn't built for real users, scale, or payments yet.
- Full technical architecture documented across frontend, backend, AI, security, and infrastructure — ready for execution the moment funding lands.
- This pre-seed raise funds the build of the Minimum Buyable Product — the first version of Nxance our real users can pay for and rely on.

MARKET OPPORTUNITY

- 50M+ active investors across stocks, mutual funds, FDs, commodities, and currency in India, growing 15-20%/year.
- Rs.55+ lakh crore in mutual fund AUM alone — combined multi-asset retail market is significantly larger — zero dedicated AI-native multi-asset product today.
- Wealthtech comparables (Groww, INDmoney) show strong retail appetite for app-first, unified financial tools.
- Long-term expansion path beyond B2C, detailed in Scalability section below.

BUSINESS MODEL — B2C REVENUE

Subscription

Freemium app, Rs.199-999/month Premium tiers for full multi-asset engine access and unlimited AI chat.

Pay-Per-Report

One-time purchase for users who want a single deep-dive portfolio report without subscribing.

SCALABLE & FUTURE EXPANSION

Once B2C is proven, the same engines extend to B2B licensing — the Health Check, Construction, and AI engines sold to MFIs, RIAs, and AMCs as a white-label, multi-asset intelligence layer. Not part of the initial revenue plan.

THE ASK

Pre-Seed — Rs.75 Lakh

Our working POC proves the technology. This raise funds the step from demo to Minimum Buyable Product (MVP) — the first version of Nxance a real customer can actually pay for and rely on. Specifically: complete the full multi-asset Health Check engine, ship the mobile app, hire 3-4 core engineers, and reach our first 1,000 users with measurable retention and willingness-to-pay.

Non-dilutive capital (SISFS grant, HP Startup Scheme) being pursued in parallel to extend runway.
